ECOSSAVERS

EcoSavers® Thermometer

WITH RECOMMENDED TEMPERATURES

Do you heat up your room to much?
Fridge or freezer too cold?

The Ecosavers® Thermometer is a thermometer using kerosene base (no mercury) and measures reliably the temperature in a range between -50° Celsius to +50° Celsius.

This thermometer helps you to reach the optimal temperature for your rooms, fridge and freezer and therefore helps you to save energy.

In many households, people heat up their rooms to much. Also their fridge and freezer are set too cold. A waste of energy, or even worse too warm, risking food being wasted unnecessarily.

Stop wasting energy and use the advised temperatures on the EcoSavers® thermometer.
