

FLOW REGULATORS

WATER SAVING

ECOSAVERS

EcoSavers® Flow Regulators

Another clever water and energy saving product from EcoSavers,
- Flow Regulators.

Energy saving can be very simple;
these flow regulators limit the water
flow out of your faucets and shower.

For the faucets, just release the
aerator by screwing the output end of
your faucet and add a flow regulator.
Now the water which is going out of
your faucet is limited to 7 litres per
minute at 3 bar pressure.

For the shower flow regulator, simply
release the shower hose from the
showerhead and put the flow
regulator between it. Connect the
shower hose again to the
showerhead and the water flow
output of your shower is limited to 8
litres per minute at 3 bar.

Energy saving can be very simple.

The EcoSavers® Flow Regulators
are a great mail out product as they
only weigh 5 grams including the
packing. They can be sent by
envelop, so mailing costs can be very
low.
