

LED DIMMER CONTROLLER

ANALOGUE

ECOSAVERS[®]

EcoSavers® LED Dimmer Controller

A dimmed light consumes less energy than a light on full brightness.

The EcoSavers LED Dimmer Controller can let you dim the light and helps you to save energy.

LED lights cannot be dimmed by traditional dimmers used for traditional and halogen light. Traditional and halogen lights use leading edge dimmers which can cause high current peaks which cause flashing of LED light and even can damage the LED light.

The EcoSavers LED Dimmer Controller is a high quality dimmer for LED lights using trailing edge.

This means that this dimmer is suitable for most of the LED lighting in the market.

Technical details:

Input:	230V AC 50Hz
Output:	2A@230V AC
Max.	460W
Dimmer	Trailing Edge
Range	0%-100% min. 1W LED
