

RADIATOR FOIL

WITH MAGNETIC TAPE

ECOSAVERS

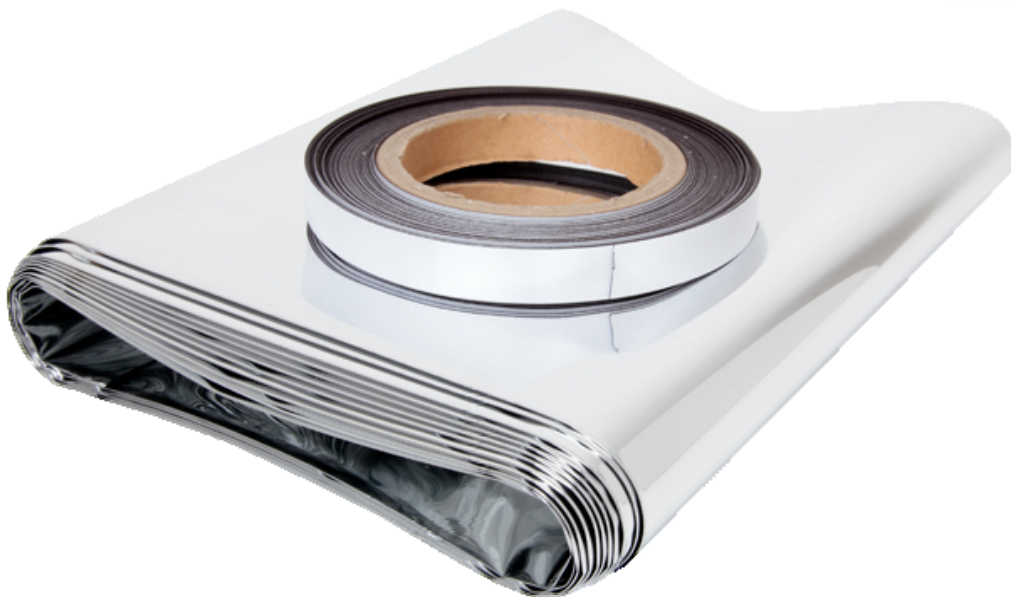

EcoSavers® Radiator Foil with magnetic tape

The EcoSavers® Radiator Foil with magnetic tape is a foil with high reflective features which can easily be installed behind the radiator. After the foil is installed, the heat produced on the backside of the radiator is reflected by the foil, which allows the radiator to operate more efficiently.

Most of the radiator foil in the market should be installed on the wall behind the radiator, but this gives an ugly visual result.

This foil can be placed directly on the back of the radiator, so visually out of sight, no glue, and no paste.

By using the magnetic tape, it's easy to install and remove for cleaning.
