

STANDBY BUTTON PC

ECOSAVERS

EcoSavers® Standby Button PC

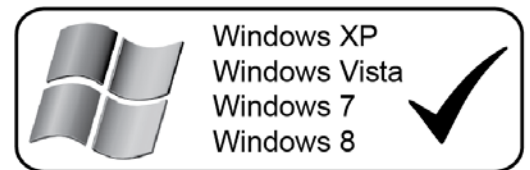

EcoSavers® makes saving energy and money easy !

The Standby Button PC is another clever product which helps you to reach these goals.

Connect the Standby Button PC to a free USB port on your computer; the device will be recognised automatically and is therefore plug and play.

When you leave for lunch, a meeting, a break etc., simply press the button and your computer will enter the sleep mode (standby mode). It will memorise all your current work and programmes opened. Your computer screen will also turn to black. Simply re-activate your computer again by the on/off button of your computer.

A computer in sleep mode consumes only a fraction of the energy compared to a computer in active mode. Besides the energy saving, if you protect your Windows system with a password, this product also helps you to protect your data when you are not there.
